RE: *BellSouth tariff to grandfather Connectionless Data Service (CDS)*
Docket No. 01-00008

Dear Mr. Howorth:

On January 4, 2001, the Tennessee Regulatory Authority (TRA) received BellSouth's tariff to grandfather Connectionless Data Service (CDS), effective February 4, 2001.

As set forth in our October 22, 1998 Order in Docket No. 97-01387¹, the Authority has established the following requirements that must be met in order for a service to be grandfathered:

- (1) Existing customers must first be notified of the discontinuation of service and allowed time to obtain service from an alternative provider;
- (2) the date for discontinuation of the grandfathering period must be approved by the Authority;
- (3) an open enrollment period must be offered to permit additional customers to sign on before the service is discontinued; and
- (4) if the service is to be discontinued while grandfathered customers are still enrolled, written notification of the plan's termination shall be provided to existing customers at least sixty (60) days prior to the plan's proposed termination.

It is requested that BellSouth demonstrate in detail how the proposed tariff complies with all of the requirements set forth in the above-referenced Order.

Please submit the requested information by January 25, 2001. If you have any questions, contact Arnold Reed at (615) 741-2904, ext. 207.

Sincerely,

David Waddell
Executive Secretary

Executive Summary

Introduction

This tariff filing is to obsolete Connectionless Data Service (CDS) in the General Subscriber Service Tariff (A40.4) and delete CDS in the Access Service Tariff (E21.2).

Description of Proposed Tariff

CDS is a connectionless, data transport service based on packet switching technology. This service allows the transfer of information among service subscribers without the need for end-to-end establishment procedures. Each packet of customer information contains address information sufficient to allow it to be switched separately through the CDS network. The CDS network supports Customer Connections at transmission rates of 56 Kbps, 64 Kbps, 128 Kbps, 1.536 Mbps and 44.210 Mbps.

Customer interest has switched to other packet services and capabilities, such as Frame Relay and Asynchronous Transfer Mode (ATM). Interexchange Carriers currently do not transport CDS type services and BellSouth's customers are currently only able to utilize this service for IntraLATA applications.

Currently, customers are able to order CDS service from BellSouth under the General Subscriber Service Tariff (A40.4) and the Access Tariff (E21.2). On June 30, 2000 there were 83 customers in Tennessee. As of October 30, 2000 there were only 59 customers remaining, reflecting a reduction of 24. There are no customers for this service under the Access Tariff (E21.2).

Customers have alternatives to CDS such as Frame Relay and ATM services that will continue to have strong industry support well into the future. Under this proposed tariff, BellSouth will waive the contract termination liability charge when the customer changes their service from CDS to another type of service, provided the customer selects a contract for that new service of at least 12 months or the amount of time remaining on their CDS contract, whichever is greater. Also, under existing tariffs, no installation charges will apply to customer moving from CDS to Frame Relay or ATM Service.

BellSouth has not determined a firm date for discontinuing CDS service in Tennessee. Once a firm date has been established, that date will be submitted to the Tennessee Regulatory Authority for review and approval. BellSouth will also provide written notice to existing customers 60 days in advance of this date.

This tariff will have no revenue impact on BellSouth.

The Consumer Advocate Division contacted us to discuss this filing in light of the Authority's Orders in Docket No. 97-01387 and Docket No. 98-00115. In those Dockets, the Authority ordered that if the Company plans to discontinue the service while grandfathered customers are still enrolled, written notification of the services' termination shall be provided to existing customers at least 60 days prior to termination of that service. This filing is being revised to add that condition to the Executive Summary (Attachment A) and the Customer Effects Section (Attachment C). We appreciate the Consumer Advocate Division calling this matter to our attention.

We appreciate your returning a receipted copy as evidence of this substitution. Please call me at 214-3839 if you have questions or wish to discuss.

Yours truly,

A handwritten signature in cursive script, reading "Paul Stinson". The ink is dark and the signature is fluid, with a long, sweeping tail on the "s".

Executive Summary

Introduction

This tariff filing is to obsolete Connectionless Data Service (CDS) in the General Subscriber Service Tariff (A40.4) and delete CDS in the Access Service Tariff (E21.2).

Description of Proposed Tariff

CDS is a connectionless, data transport service based on packet switching technology. This service allows the transfer of information among service subscribers without the need for end-to-end establishment procedures. Each packet of customer information contains address information sufficient to allow it to be switched separately through the CDS network. The CDS network supports Customer Connections at transmission rates of 56 Kbps, 64 Kbps, 128 Kbps, 1.536 Mbps and 44.210 Mbps.

Customer interest has switched to other packet services and capabilities, such as Frame Relay and Asynchronous Transfer Mode (ATM). Interexchange Carriers currently do not transport CDS type services and BellSouth's customers are currently only able to utilize this service for IntraLATA applications.

Currently, customers are able to order CDS service from BellSouth under the General Subscriber Service Tariff (A40.4) and the Access Tariff (E21.2). On June 30, 2000 there were 83 customers in Tennessee. As of October 30, 2000 there were only 59 customers remaining, reflecting a reduction of 24. There are no customers for this service under the Access Tariff (E21.2).

Customers have alternatives to CDS such as Frame Relay and ATM services that will continue to have strong industry support well into the future. Under this proposed tariff, BellSouth will waive the contract termination liability charge when the customer changes their service from CDS to another type of service, provided the customer selects a contract for that new service of at least 12 months or the amount of time remaining on their CDS contract, whichever is greater. Also, under existing tariffs, no installation charges will apply to customer moving from CDS to Frame Relay or ATM Service.

BellSouth has not determined a firm date for discontinuing CDS service in Tennessee. Once a firm date has been established, that date will be submitted to the Tennessee Regulatory Authority for review and approval. BellSouth will also provide written notice to existing customers 60 days in advance of this date.

This tariff will have no revenue impact on BellSouth.

CUSTOMER EFFECTS

This tariff will have no effect on current CDS customers, and new customers may order CDS service prior to the effective date of this tariff. Under this proposed tariff, BellSouth will waive the termination liability charge for any customer who changes from CDS to another service provided that the customer selects a new contract of at least 12 months or the amount of time remaining on the CDS contract, whichever is greater. Also, under existing tariffs, no installation charge will apply to customers moving from CDS to Frame Relay or ATM service.

BellSouth has not determined a firm date for discontinuing CDS service in Tennessee. Once a firm date has been established, that date will be submitted to the Tennessee Regulatory Authority for review and approval. BellSouth will also provide written notice to existing customers 60 days in advance of this date.

(N)

A140.4.1 General

(TXM)

- A. Connectionless Data Service (CDS) is a connectionless, data transport service based on packet switching technology. According to CCITT Recommendation I.113, "this is a service which allows the transfer of information among service subscribers without the need for end-to-end establishment procedures". Each packet of customer information contains address information sufficient to switch it separately through the CDS network. (M)
- B. The CDS network supports 56 Kbps, 64 Kbps, 128 Kbps, 1.536 Mbps, or 44.210 Mbps for electrical interfaces with Customer Premises Equipment (CPE). Technical requirements for these interfaces are contained in Bell Communication Research Technical Reference TR-TSV-001239. This Technical Reference may be ordered from:
Director Information Exchange Management
Bellcore
445 South Street, MRE 2J-125
Morristown, NJ 07962-1910 (M)
- C. The protocol for communication between the Customer Premises Equipment (CPE) and the CDS network interface is called Data Exchange Interface (DXI). The DXI protocol was defined by the SMDS interest group in SIG-001 and SIG-005. These documents may be ordered from:
SMDS Interest Group
19022 Brookhaven Drive
Saratoga, CA 95070 (M)
- D. CDS, as provided under the provisions of this Tariff section, is offered for intraLATA use only. (M)
- E. The regulations and rates specified herein are in addition to the applicable regulations and rates specified in other sections of this and other tariffs of the Company. (M)

EFFECTIVE: February 4, 2001

A140. OBSOLETE SERVICE OFFERINGS-FAST PACKET TRANSPORT SERVICES

A140.4 Connectionless Data Service (CDS) (Cont'd)

A140.4.1 General (Cont'd)

- F. The rates and charges set forth for CDS provide for the furnishing of service where suitable facilities are available. (N)
- G. CDS is only available when provided in conjunction with Broadband Exchange Line Service. Specifications for Broadband Exchange Line Service are contained in A40.5 of this Tariff. (T)(M)

A140.4.2 Regulations

A. Explanation of Terms

1. Customer Connection to CDS

The Customer Connection provides the customer with the standard CDS subscriber network interface to the CDS network. The CDS switch receives the data packet from the customer's network or device and verifies that the source address is one legitimately assigned to that interface. These interfaces connect the CDS network with digital facilities operating at transmission speeds of 56 Kbps, 64 Kbps, 128 Kbps, 1.536 Mbps, or 44.210 Mbps. Included in the Customer Connection are the customer's termination on the CDS switching equipment, the transport from the Serving Area Point to the switching equipment, and one address. (M)

2. CDS Network Serving Area

Certain Company Central Offices are designated by the Company as Serving Area Points for the CDS Network Serving Area. A customer accessing the CDS Network, whose Serving Wire Center is designated a Serving Area Point, requires a Broadband Exchange Line-Fast Packet Option (FPO) as described in A40.5 of this Tariff. A CDS customer, whose Serving Wire Center is not designated a Serving Area Point, will use a Broadband Exchange Line-FPO to the Serving Wire Center, as well as, the Broadband Exchange Line Extension-FPO (also described in A40.5) to gain access to the closest designated Serving Area Point. (M)

3. CDS Network Serving Area Juncture

The Juncture is necessary for a customer wishing to transmit data via CDS among multiple locations which are within the LATA but served in different CDS Network Serving Areas. The Juncture is only available where the Company has elected to establish facilities between CDS switching equipment in different Network Serving Areas in the same LATA and to allow customers to share these facilities. (M)

4. Protocol

A format set of conventions governing the format and relative timing of message exchange between two communications processes. (M)

5. Serving Area Point

A Company Central Office that is designated as a member of the CDS Network Serving Area. (See the definition of CDS Network Serving Area preceding.) (M)

B. Feature Definitions

1. Group Address List

This feature allows the customer to pre-assign a list of individual Customer Connection addresses as a Group Address. With this feature invoked, data that is sent to the Group Address will be reproduced by the CDS network and sent to every Customer Connection that has an address on the list. A maximum of 128 Customer Connection addresses may be contained in one Group Address List. (M)

2. Multiple Addresses

This feature allows the customer to have multiple addresses associated with one Customer Connection. A maximum of 16 addresses is allowed per CDS Customer Connection ordered. The first address is provided at no additional charge. An additional charge applies for every address per Customer Connection excluding the first address. (M)

EFFECTIVE: February 4, 2001

A140. OBSOLETE SERVICE OFFERINGS-FAST PACKET TRANSPORT SERVICES
A140.4 Connectionless Data Service (CDS) (Cont'd)

A140.4.2 Regulations (Cont'd)

B. Feature Definitions (Cont'd)

3. Address Screening

Address Screening allows restrictions to be enforced on the delivery of CDS data units from particular sources and on the transmittal of CDS data units to particular destinations. This feature allows the customer to set up two lists of addresses per Customer Connection. One list defines destination address screening for individually addressed data units and source address screening for all data units (whether individual or group addressed). The second list defines destination address screening for group addressed data sent by the CPE.

The combined total of addresses in both tables may not exceed 128.

4. Feature Change Charge

In addition to any specific optional feature charges, a Feature Change Charge will be applied whenever a change is made (at the customer's request) to a single optional feature for a single customer within a single network configuration on a single switch within a single jurisdiction. One Feature Change Charge will apply per service order required to perform the work.

C. Basis of Offering

1. Detailed monthly billing is not provided.

2. Suspension of service is not allowed.

3. The minimum service period is one month.

4. Obligations of Customer and Company.

a. The Company is not responsible for the installation, operation, or maintenance of any equipment provided by the customer.

b. The customer is responsible for the provision and maintenance of all CPE and to ensure that the operating characteristics of this equipment is compatible with and does not interfere with the service offered by the Company.

5. In order to maintain the quality of CDS, the Company reserves the right to perform preventative maintenance and software updates to the network. This could result in CDS being unavailable during the time period between 2:00 A.M. and 4:00 A.M. Eastern Time on any given Wednesday or Sunday morning. However, the Company only expects to utilize this maintenance window for any given switch on the average of once a quarter. In addition, the Company will make every reasonable effort to provide advance notice to those customers likely to be severely affected by such maintenance work. This maintenance window may be adjusted by the Company upon written notice to the customer.

D. Provision of Service

1. Rates and charges contained in this Section of the Tariff consist of the following elements:

a. Customer Connection to CDS

b. CDS Features

2. Certain Company Central Offices are designated by the Company as Serving Area Points for the CDS Network Serving Area. A customer accessing the CDS Network, whose Serving Wire Center is designated a Serving Area Point, will only require a Broadband Exchange Line-FPO as described in A40.5 of this Tariff. A CDS customer, whose Serving Wire Center is not designated a Serving Area Point, will require a Broadband Exchange Line-FPO to the Serving Wire Center, as well as, the Broadband Exchange Line Extension-FPO (also described in A40.5) to gain access to the closest designated Serving Area Point.

3. The Customer Connection rate element includes the customer's transport from a Serving Area Point to the CDS switching equipment and the customer's termination on the CDS switching equipment.

EFFECTIVE: February 4, 2001

A140. OBSOLETE SERVICE OFFERINGS-FAST PACKET TRANSPORT SERVICES
A140.4 Connectionless Data Service (CDS) (Cont'd)

A140.4.2 Regulations (Cont'd)

D. Provision of Service (Cont'd)

4. Service Connection Charges for installing CDS are included in the respective nonrecurring charges specified herein. Service Connection Charges from Section A4. of this Tariff are not applicable for installing such services. (N)
5. In Network Serving Areas where Network Serving Area Junctions are available, the following applies. Should a customer, having locations in more than one CDS Network Serving Area within a LATA, desire to transmit data traffic between these locations via CDS, the customer must subscribe to a Network Serving Area Junction for each Customer Connection. The Network Serving Area Junctions are speed dependent, so for each Customer Connection operating at 1.536 Mbps, a 1.536 Network Serving Area Junction is required. Likewise, for each Customer Connection operating at 56 Kbps or 64 Kbps, a 56/64 Network Serving Area Junction is required. (TXM)

For example, a customer has three 56 Kbps locations in CDS Network Serving Area I, one 1.536 Mbps location and two 64 Kbps locations in CDS Network Serving Area II, and one 1.536 Mbps location in CDS Network Serving Area III. All three CDS Network Serving Areas are within the same LATA. To be able to send traffic among these locations, the customer would subscribe to five 56/64 Network Serving Area Junctions and two 1.536 Network Serving Area Junctions. (M)

6. In some cases, the Company and another Incumbent Local Exchange Company that offers CDS technology will jointly connect CDS switching equipment within a LATA to provide customers the ability to interconnect their location served by different companies. In order to utilize the Company's portion of this jointly provided shared connection, the customer must subscribe to one Network Serving Area Junction for each location served by the Company. (M)

E. Contract Plans

1. Contract plans are available under conditions specified in the Fast Packet Services Payment Plan in A40.10 of this Tariff with contract periods described as follows: (M)
 - a. Term Payment Plan A - payment periods may be selected from 12 to 36 months. (M)
 - b. Term Payment Plan B - payment periods may be selected from 37 to 60 months. (M)
2. **(DELETED)** (D)

EFFECTIVE: February 4, 2001

A140. OBSOLETE SERVICE OFFERINGS-FAST PACKET TRANSPORT SERVICES
A140.4 Connectionless Data Service (CDS) (Cont'd)

A140.4.3 Rates and Charges

A. Customer Connection to CDS

1. A minimum of one Customer Connection is required per customer to subscribe to CDS. Each Customer Connection includes Address #1.

	Nonrecurring	Month To	A 12 to 36 Months	B 37 to 60 Months	USOC
